SOFTWARE ENGINEER

Full-stack software engineer with 5+ years of experience building and modernizing enterprise web applications. Most recently helped lead the modernization of a blended traditional/headless CMS platform to a modern React, TypeScript, Node.js, Express, and Storyblok architecture while continuing to deliver production features across the stack. Experienced collaborating with cross-functional teams to deliver scalable, customer-facing applications using modern web technologies and AI-assisted development workflows.

TECHNICAL SKILLS

Proficient: React, JavaScript, AI-assisted development, TypeScript, Vue.js, HTML, CSS, Next.js, SCSS, Git, REST APIs, Sitefinity CMS, Storyblok, C#, ASP.NET Core, .NET, Azure, SQL, Agile, Node.js/Express

Familiar: Angular, Salesforce, Bootstrap, React Testing Library, Jest, Entity Framework, Java, Ruby on Rails, Mapbox GL

Exposure to: JWT Authorization, SQLite3, PostgreSQL, Zod, Elasticsearch

EXPERIENCE

Avixa Remote
Full-stack Software Developer Mar 2024 – June 2026

- Contributed to and managed key parts of an enterprise CMS modernization from Sitefinity to Next.js 15 and Storyblok, helping migrate content and front-end experiences to a headless architecture.
- Built end-to-end production React/Next.js features including a member dashboard with 12+ integrated modules for certifications, company roster, demographics, and support services.
- Built and maintained reusable CMS widgets, API controllers/endpoints, and content-driven features within Sitefinity and Storyblok, enabling editors to manage dynamic website content efficiently.
- Partnered with designers, product owners, and other engineers to deliver new website functionality in an Agile environment.
- Participated in Agile sprint planning, code reviews, Git-based version control, and collaborative release cycles.
- Integrated Salesforce REST APIs and Pardot synchronization, implementing role-based access and CSV/XLSX export functionality.
- Built an interactive certification map using Mapbox GL with real-time geospatial search and touch-friendly kiosk support.
- Contributed to a .NET 8 authentication service implementing Salesforce OpenID Connect SSO with claims-based and role-based authorization.
- Leveraged AI-assisted development tools (Claude, Codex, GitHub Copilot) for code generation, debugging, documentation, and accelerating feature delivery across React, TypeScript, Node.js, and .NET applications.
- Optimized performance, API interactions, and application responsiveness during modernization efforts.
- Developed accessible React components and frontend features following WCAG best practices and semantic HTML.

Remotask A.I. Remote
A.I. Trainer Jan 2024 – Jan 2026

- Evaluated and improved LLM outputs for code generation, software engineering, and NLP tasks, providing structured feedback to increase response quality.
- Provided structured feedback to improve model intent alignment and response reliability

RTS Labs Richmond, VA
Software Engineer Mar 2021 – Aug 2023

- Maintained and enhanced React front-end applications alongside legacy Ruby on Rails systems.
- Developed a single-page application (SPA) marketing platform for university recruiters using React and JavaScript.
- Collaborated on API and database modernization for enterprise property rental systems.

EDUCATION

Liberty University –	Lynchburg, VA
Computer Science	(2018–2020)
Flatiron School –	Washington, DC
Full Stack Web Development	(2020)
Southern Virginia University –	Buena Vista, VA
Political Science	(2016)

TECHNICAL PROJECTS

Beta Climbers - [Github](#)

A social app for climbers to stay in touch and share info about climbing routes. Made with a partner using HTML, CSS, and Ruby on Rails for the entire MVC interactions. We used sqlite3 as our database.

- Parallel programming project that required a large amount of communication and teamwork.
- Built the MVC with rails.
- Displayed views with HTML, CSS, XML, and partials.
- Used Git for version control so we could work on the same code simultaneously.

aDeli Restaurant, Manassas - Github: [Frontend Backend](#)

Pure vanilla javascript frontend allowing a user to switch between menus and simulate a cart. Pop-up menu selection giving the user a choice of size depending on the menu item selected.

- Full-stack SPA(single page application).
- Self-built APIs coming from a ruby backend.
- Persists data with a postgres database.
- Utilizes local storage on the client browser.

Neighborhood Heroes - Github: [Frontend Backend](#)

Tournament creation app for a user to sign up, create/join tournaments, create/log tasks, and connect with other users through competition.

- Built the backend with Ruby on Rails and created my own APIs to serve the frontend.
- Frontend built with React and Redux using both functional and class components.
- Makes calls to custom APIs stored in the state(redux) and accessed through actions and reducers.

Weather Website - [Github](#)

Full-stack web application that finds the current weather for any area you enter using API's from Mapbox.com and weatherstack.com.

- Built the backend with Node.js to integrate with javascript seamlessly.
- Designed views with HTML, CSS, and partials from the handlebars package for quick templating.
- Calls to APIs to get latitude and longitude and then send that to another API for the weather.
